

## **JUVENILE DETENTION PROFILE SURVEY**

### **EXPLANATION OF RESULTS**

The following pages contain the results of the Juvenile Detention Profile Survey for the Second Quarter of 2000. Page 1 contains totals for major categories such as Highest One-Day Population, Average Daily Population (ADP), gender, and the age range of detained minors. Page 2 contains information about a wide range of juvenile detention facility issues including crowding, the minor's mental health needs, average length of stay, and number of bookings. As data reporting periods accumulate, we will add trend data to allow us to track important juvenile detention facility indicators.

Please keep the following in mind when reviewing this information:

- For Overall Capacity, Crowding (highest one-day population-the count of minors in detention on the day of each county's highest population) and ADP (the average daily detention population for the reporting period), we have complete data from all jurisdictions in the state that operate juvenile detention facilities.
- Each jurisdiction provides us with the average population, computed across all the days in the month, for each of the three months in the quarter. The weighted average across the three months is then computed for each jurisdiction (with the monthly averages weighted by the number of days in the month). The jurisdictions ADPs are then summed to produce the state's total ADP.
- For some variable, we do not always receive data from all jurisdictions. For example, some jurisdictions might report that they do not know the number of detainees who are illegal/criminal aliens. When this happens, we compute the percentage of the ADP housed in similar jurisdictions that did supply us with data. Then we project what the illegal/criminal alien total probably would have been had we obtained data from all respondents.
- Felony/misdemeanor, and gender counts, and age-range breakdowns are based upon a one-day snapshot (the day being the 15<sup>th</sup> of the final month of the quarter). These values are used to determine the percentage of the population in each felony/misdemeanor, gender, and age-category. The percentages are then applied to the Total ADP to project the expected ADP in each of the felony/misdemeanor, gender, and age-range categories.
